Bedford County

At 71st, Bedford County is at the lower end of Tennessee counties in child well-being. Some of the county's strongest rankings include that the rate of substantiated cases of child abuse and neglect is relatively low and median household income is relatively high. The county's biggest challenges are its above average percentage of children who lack health insurance and the above average rate of pregnancy among girls age 15 to 17.

Additional strengths include relatively low rates of child and teen deaths, of child poverty (22.9 percent is still too high, but better than most Tennessee counties) and of babies born at a low birthweight.

Additional opportunities for improvement include the low percentage of 3rd to 8th grade students who demonstrated proficiency on TNReady reading and math tests.

- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Bedford County has over 500 children who qualify for these health insurance programs but who nonetheless lack insurance.
- Comprehensive sex education classes that include both encouragement of abstinence and information on birth control have been shown to reduce the number of teen pregnancies.
- Increased access to pre-K can help both math and reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency, while increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.

Coffee County

At 32nd, Coffee County ranks right at the top third of Tennessee counties in child well-being. Some of the county's strongest rankings include a high median household income and a relatively low rate of child poverty. Though it is still a higher number than one would hope, Coffee County's 21.5 percent child poverty places is lower than most Tennessee counties. The county's biggest challenges are its above average rate of pregnancies among girls age 15 to 17 and of babies born at a low birthweight.

Additional strengths include below average rates of children lacking health insurance and of school suspensions

Additional opportunities for improvement include a low high school graduation rate and a low rate of 3rd to 8th grade children rated proficient in math on TNReady tests.

- Comprehensive sex education classes that include both encouragement of abstinence and information on birth control have been shown to reduce the number of teen pregnancies.
- Low birthweight is a persistent and difficult problem, but improvements can occur when care is made available for chronic physical and mental health and substance abuse conditions for women of childbearing age.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.
- Expanding pre-K access and increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.

Franklin County

At 45th, Franklin County is in the top half of Tennessee counties in child well-being. The county's highest rankings reflect a low rate of school suspension and a relatively low rate of children who live in poverty. Though it is still a higher number than one would hope, Franklin County's 20.3 percent child poverty rate is better than most counties in Tennessee. The county's biggest challenges are a low percentage of 3rd to 8th grade students rated as proficient in reading and math on TNReady tests.

Additional strengths are a high median household income and a relatively low child and teen death rate.

Additional opportunities for improvement include relatively high rates of babies born at a low birthweight and a low high school graduation rate.

- Expanding pre-K access can help reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency in 3rd to 8th grade. Increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.
- Low birthweight is a persistent and difficult problem, but improvements can occur
 when care is made available for chronic physical and mental health and substance
 abuse conditions for women of childbearing age as well as improving outreach to
 those who may qualify to receive SNAP, WIC and/or TennCare benefits to be sure
 they are aware of these services. Expanding services through Family Resource
 Centers can help reach these vulnerable populations.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.

Giles County

At 51st, Giles County is in the bottom half of Tennessee counties in child well-being. The county's best rankings reflect a relatively low rate of rate of pregnancies among girls age 15 to 17 and of children who live in poverty. Though it is still a higher number than one would hope, Giles County's 21.1 percent child poverty rate is better than most counties in Tennessee. The county's biggest challenges are low rate of 3rd to 8th grade students rated as proficient in reading on TNReady reading tests and a high rate of child and teen deaths.

Additional strengths include low housing costs and a comparatively low rate of substantiated cases of child abuse and neglect.

Additional opportunities for improvement include relatively high rates of children without health insurance and of babies born at a low birthweight.

- Increased access to pre-K can help reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency in 3rd to 8th grade.
- Child and teen deaths can be reduced with consistent enforcement of safety
 measures like proper car seat and seat belt use, bicycle helmet use and life
 preserver use around water. The fastest-growing cause of child and teen deaths in
 recent years has been homicide and suicide, often involving a firearm. Families who
 own firearms can reduce the risk to children and teens by following safe storage
 practices.
- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Giles County has over 200 children who qualify for these health insurance programs but who nonetheless lack insurance.
- Low birthweight is a persistent and difficult problem, but improvements can occur
 when care is made available for chronic physical and mental health and substance
 abuse conditions for women of childbearing age as well as improving outreach to
 those who may qualify to receive SNAP, WIC and/or TennCare benefits to be sure
 they are aware of these services. Expanding services through Family Resource
 Centers can help reach these vulnerable populations.

Hickman County

At 57th, Hickman County is in the bottom half of Tennessee counties in child well-being. The county's strongest rankings include relatively low rates of babies born at a low birthweight and of suspensions in school. The county's biggest challenges include a comparatively high rate of children without health insurance and a low high school graduation rate.

Additional strengths include a low rate of child and teen deaths and of pregnancy among girls age 15 to 17.

Additional opportunities for improvement include a low percentage of 3rd to 8th grade students rated proficient in math on TNReady tests and above average housing costs.

- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Hickman County has almost 200 children who qualify for these health insurance programs but who nonetheless lack insurance.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.
- Increased access to pre-K can help both math and reading proficiency in later grades. Increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.
- Pro-active housing policy that helps ensure affordable housing is available for people to live where they work can improve negative outcomes related to high housing costs.

Lawrence County

At 25th, Lawrence County is just outside the top fourth of Tennessee counties in child wellbeing. Some of the county's strongest rankings include low housing costs and a strong high school graduation rate. The county's biggest opportunities for improvement are a high rate children who lack health insurance and of child and teen deaths.

Additional strengths include a relatively high rate of 3rd to 8th grade students demonstrating proficiency on TNReady reading tests and a relatively low rate of substantiated cases of child abuse and neglect.

An additional challenge is below average median household income.

- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Lawrence County has almost 350 children who qualify for these health insurance programs but who nonetheless lack insurance.
- Child and teen deaths can be reduced with consistent enforcement of safety
 measures like proper car seat and seat belt use, bicycle helmet use and life
 preserver use around water. The fastest-growing cause of child and teen deaths in
 recent years has been homicide and suicide, often involving a firearm. Families who
 own firearms can reduce the risk to children and teens by following safe storage
 practices.
- With a low median household income, improving outreach to those who may qualify
 to receive SNAP, WIC and TennCare benefits to be sure they are aware of these
 services can help ensure basic needs are met. Additionally, nutrition programs that
 provide food for school-age children to take home can contribute to food security.
 Expanding services through Family Resource Centers can also help reach these
 vulnerable populations.

Lewis County

At 68th, Lewis County ranks in the bottom third of Tennessee counties in child well-being. Some of the county's strongest rankings include a relatively low rate babies born at a low birthweight and of children who lack health insurance. The county's biggest opportunities for improvement are high rates of pregnancy among girls age 15 to 17 and of one of the state's lowest high school graduation rates.

Additional strengths include an above average rate of 3rd to 8th grade students demonstrating proficiency on TNReady reading tests and a below average rate of school suspensions.

Additional challenges include a low median household income and an above average rate of child and teen deaths.

- Comprehensive sex education classes that include both encouragement of abstinence and information on birth control have been shown to reduce the number of teen pregnancies.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.
- Counties can support children in low income families by improving outreach to those who may qualify to receive SNAP, WIC and/or TennCare benefits to be sure they are aware of these services. Additionally, nutrition programs that provide food for school-age children to take home can contribute to nutritionally sound diets. Expanding services through Family Resource Centers can also help reach these vulnerable populations.
- Child and teen deaths can be reduced with consistent enforcement of safety
 measures like proper car seat and seat belt use, bicycle helmet use and life
 preserver use around water. The fastest-growing cause of child and teen deaths in
 recent years has been homicide and suicide, often involving a firearm. Families who
 own firearms can reduce the risk to children and teens by following safe storage
 practices.

Lincoln County

At 17th, Lincoln County ranks in the top fifth of Tennessee counties in child well-being. The county's best rankings include a relatively high rate of 3rd to 8th grade students demonstrating proficiency on TNReady reading tests and a strong high school graduation rate. The county's biggest opportunities for improvement include having relatively high rates of children who lack health insurance and of substantiated cases of child abuse and neglect.

Additional strengths include below average rates of pregnancy among girls age 15 to 17 and a relatively low rate of child poverty (19.3 percent is still too high, but better than most Tennessee counties).

Additional challenges include an above average percent of babies born at a low birthweight and a school suspension rate that is above the median for Tennessee counties.

- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Lincoln County has over 220 children who qualify for these health insurance programs but who nonetheless lack insurance.
- Two-generation programs such as evidence-based home visiting have been shown to reduce instances of child abuse and neglect.
- Low birthweight is a persistent and difficult problem, but improvements can occur when care is made available for chronic physical and mental health and substance abuse conditions for women of childbearing age, as well as improving outreach to those who may qualify to receive SNAP, WIC and/or TennCare benefits to be sure they are aware of these services. Additionally, nutrition programs that provide food for school-age children to take home can contribute to nutritionally sound diets for women in their childbearing years. Expanding services through Family Resource Centers can help reach these vulnerable populations.
- Suspension rates can be reduced through clear definitions of what constitutes suspendable behavior and a focus on restorative discipline practices that aim to improve behavior while keeping children in school.

Marshall County

At 19th, Marshall County is just at the top fifth of Tennessee counties in child well-being. Some of the county's strongest rankings include a low rate of child poverty (15.8 percent is still too high, but better than most Tennessee counties) and a high median household income. The county's biggest opportunities for improvement are high rates of students suspended from school and of child and teen deaths.

Additional strengths include a strong high school graduation rate and a high percentage of 3rd to 8th grade students demonstrating proficiency on TNReady math tests.

An additional challenge is a high percentage of babies born at a low birthweight.

- Suspension rates can be reduced through clear definitions of what constitutes suspendable behavior and a focus on restorative discipline practices that aim to improve behavior while keeping children in school.
- Child and teen deaths can be reduced with consistent enforcement of safety
 measures like proper car seat and seat belt use, bicycle helmet use and life
 preserver use around water. The fastest-growing cause of child and teen deaths in
 recent years has been homicide and suicide, often involving a firearm. Families who
 own firearms can reduce the risk to children and teens by following safe storage
 practices.
- Low birthweight is a persistent and difficult problem, but improvements can occur when care is made available for chronic physical and mental health and substance abuse conditions for women of childbearing age, as well as improving outreach to those who may qualify to receive SNAP, WIC and/or TennCare benefits to be sure they are aware of these services. Additionally, nutrition programs that provide food for school-age children to take home can contribute to nutritionally sound diets for women in their childbearing years. Expanding services through Family Resource Centers can help reach these vulnerable populations.

Maury County

At 60th, Maury County ranks in the bottom half of Tennessee counties in child well-being. Some of the county's strongest rankings include relatively low rates of substantiated cases of child abuse and neglect and of child poverty. Though it is still a higher number than one would hope, Maury County's 15.5 percent child poverty rate puts it among the best 10 counties on this measure. The county's biggest opportunities for improvement are a high rate of school suspensions and a low rate of 3rd to 8th grade students demonstrating proficiency on TNReady tests of reading and math.

Additional strengths include a high median household income and a relatively low rate of children without health insurance.

Additional challenges include high housing costs and low high school graduation rate.

- Suspension rates can be reduced through clear definitions of what constitutes suspendable behavior and a focus on restorative discipline practices that aim to improve behavior while keeping children in school.
- Increased access to pre-K can help both math and reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency, while increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.
- Pro-active housing policy that helps ensure affordable housing is available for people to live where they work can improve negative outcomes related to high housing costs.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.

Moore County

At 46th, Moore County is in the top half of Tennessee counties in child well-being. Some of the county's strongest rankings are a low rate of substantiated cases of child abuse and neglect and a low child poverty rate. Though it is still a higher number than one would hope, Moore County's 15.6 percent child poverty rate is in the best 10 counties on this measure. The county's biggest opportunities for improvement are the highest child and teen death rate in the state and a low high school graduation rate.

Additional strengths include a high median household income as well as low rates of babies born at a low birthweight and of students suspended from school.

An additional challenge is a high rate of pregnancy among girls age 15 to 17 and a low percentage of 3rd to 8th grade students rated proficient on TNReady reading tests.

- Child and teen deaths can be reduced with consistent enforcement of safety
 measures like proper car seat and seat belt use, bicycle helmet use and life
 preserver use around water. The fastest-growing cause of child and teen deaths in
 recent years has been homicide and suicide, often involving a firearm. Families who
 own firearms can reduce the risk to children and teens by following safe storage
 practices.
- Making high school students aware of the community college and technical school benefits available to them through Tennessee Promise can encourage on-time high school graduation.
- Comprehensive sex education classes that include both encouragement of abstinence and information on birth control have been shown to reduce the number of teen pregnancies.
- Increased access to pre-K can help reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency in 3rd to 8th grade.

Perry County

At 69th, Perry County is in the bottom third of Tennessee counties in child well-being. The county's best rankings include no child and teen deaths in 2017 and low housing costs. The county's biggest opportunities for improvement come from its high rates of substantiated cases of child abuse and neglect and of pregnancy among girls age 15 to 17.

Additional strengths include a low rate of babies born at a low birthweight and a below average rate of student suspensions from school.

Additional challenges include a low median household income, the fact that over 1 in 4 of the county's children live in poverty and a relatively high rate of children who lack health insurance.

- Two-generation programs such as evidence-based home visiting have been shown to reduce instances of child abuse and neglect.
- Comprehensive sex education classes that include both encouragement of abstinence and information on birth control have been shown to reduce the number of teen pregnancies.
- With a low median household income and high rate of child poverty, improving outreach to those who may qualify to receive SNAP, WIC and TennCare benefits to be sure they are aware of these services can help ensure basic needs are met. Additionally, nutrition programs that provide food for school-age children to take home can contribute to food security. Expanding services through Family Resource Centers can also help reach these vulnerable populations.
- Most uninsured children in Tennessee qualify for either TennCare or CoverKids, so high rates of uninsured children can be improved with outreach to make sure that families are aware of these insurance opportunities. According to Census Bureau estimates, Perry County has almost 70 children who qualify for these health insurance programs but who nonetheless lack insurance.

Wayne County

At 74th, Wayne County ranks in the bottom third of Tennessee counties in child well-being. The county's best rankings include the lowest housing costs in the state and a low rate of student suspensions from school. The county's biggest opportunities for improvement include a high rate of babies born at a low birthweight and below average percentages of 3rd to 8th grade students demonstrating proficiency on TNReady reading and math tests.

Additional strengths include a strong high school graduation rate and a below average rate of child and teen deaths.

Additional challenges include a high rate of substantiated cases of child abuse and neglect, a low median household income and the fact that more than 1 in 4 of the county's children live in poverty.

- Low birthweight is a persistent and difficult problem, but improvements can occur when care is made available for chronic physical and mental health and substance abuse conditions for women of childbearing age.
- Increased access to pre-K can help both math and reading proficiency in later grades. Early assessment of reading skills coupled with appropriate interventions where needed can improve reading proficiency, while increasing STEM opportunities in elementary and middle schools can help improve 3rd to 8th grade math proficiency.
- Two-generation programs such as evidence-based home visiting have been shown to reduce instances of child abuse and neglect.
- With a low median household income, counties can support children who live in
 poverty by improving outreach to those who may qualify to receive SNAP, WIC
 and/or TennCare benefits to be sure they are aware of these services. Additionally,
 nutrition programs that provide food for school-age children to take home can
 contribute to nutritionally sound diets. Expanding services through Family Resource
 Centers can also help reach these vulnerable populations.

TENNESSEE'S CHILDREN 2018

State Population: 6,548,009 | Population of Children Under 18: 1,476,765

ADOPTION, KINSHIP CARE, AND PERMANENT FAMILIES FOR CHILDREN

- Of the 5,558 children exiting out-of-home care in 2016 in Tennessee, 50% were reunited with their parents or primary caretakers.¹⁵
- 1,224 children were legally adopted through a public child welfare agency in Tennessee in 2016, an increase of 10% from 1,113 in 2015.16
- Of the 8,333 children in out-of-home care in 2016, there were 2,541 or 30.5% waiting to be adopted.¹⁷
- In 2016, approximately
 71,523 grandparents in Tennessee had the primary responsibility of caring for their
 grandchildren.
- 801 of the children in out-of-home care in 2015 were living with relatives while in care.

CHILD ABUSE AND NEGLECT

- •In 2016, Tennessee had 122,751 total referrals for child abuse and neglect. Of those, 75,018 reports were referred for investigation.⁸
- In 2016, there were 9,665 victims of abuse or neglect in Tennessee, a rate of 6.4 per 1,000 children, a decrease of 14.9% from 2015. Of these children, 26.2% were neglected, 60.7% were physically abused, and 27.4% were sexually abused.
- The number of child victims has decreased 14.9% in comparison to the number of victims in 2015.¹⁰

CHILD CARE AND HEAD START

- In 2015, Tennessee had a monthly average of 25,500 children served by subsidized child care. An average of 32,900 children received subsidized child care per month in 2014 and 38,800 were recipients in
 28
 2013.
- In 2016, to be eligible for subsidized child care in Tennessee, a family of three could make no more than \$32,268 at application, which is equivalent to 58% of the state's median

 29
 income.
- As of early 2016, Tennessee had no children on it's waiting list for child care
 30 assistance.
- In 2016, Head Start served 17,430 children in Tennessee, a decrease of 1.8% from 2015.
- Through federal grants from the Home Visiting Program, in fiscal year 2015, home visitors in Tennessee made 20,633 home visits to 2,893 parents and children in 1,490 families, as well as enrolled 1,463 new parents and children to the program.

- •In 2016, there were 41 child deaths resulting from abuse or neglect reported in Tennessee. ¹¹
- 8,333 children in Tennessee lived apart from their families in out-of-home care in 2016, compared with 7,780 children in 2015. Of the children living apart from their families in 2014, there were 2,496 aged 5 or younger, and 1,766 were 16 or older.¹²
- The number of children living apart from their families in out-of-home care has increased 7.1% in comparison to the number of children in out-of-home care in 2015.¹³

Children in Out-of-Home Care 2015

- White
- Black
- Hispanic
- 🔵 American Indian/Alaskan Native: .5%
- Asian or Pacific Islander: .5%
- More Than One Race/Ethnicity or Undetermined Race or Ethnicity

CHILD POVERTY AND INCOME SUPPORT

- •The monthly average number of individuals receiving Temporary Assistance for Needy Families (TANF) in Tennessee decreased from 87,101 in 2015 to 68,975 in 2016, a 26.6% change. There was a 30,769 monthly average of families received TANF in 2016, a decrease of 23.1% from 2015. ²⁰
- In 2016, for every 100 poor families with children, only 23 received

WIC - Infant and Children under age 5

Wayne	Percent	45.0%	48.4%	46.9%	42.1%	42.1%

The rate of children under five years of age on WIC is consistently larger than the state of Tennessee. Franklin, Hickman and Maury counties are the exception. When looking at the chart below, it is of note that children on WIC enrolled in our program are at a higher percentage than the community.

One of our program goals is to increase the WIC enrollment for our enrollees. Last year, 54.8% of our children were enrolled in WIC by the end of the program year. This year, by January 2020, we have seen a 1% increase in WIC enrollment for our enrolled children.

In Lincoln County, 68% of our enrolled children receive WIC services, with Giles County being the second highest at 67.7% enrollment.

Based on this data, it appears that Hickman County has the lowest number of enrolled children in WIC with Franklin and Wayne being the next lowest.

Designated Qualified Opportunity Zones

The IRS designates "An Opportunity Zone as an economically-distressed community where new investments, under certain conditions, may be eligible for preferential tax treatment. Localities qualify as Opportunity Zones if they have been nominated for that designation by the state and that nomination has been certified by the Secretary of the U.S. Treasury via his delegation of authority to the Internal Revenue Service." Six our thirteen counties have been designated as opportunity zones. These counties are Bedford, Hickman, Lawrence, Lincoln, Marshall and Wayne. Being designated as Opportunity Zones will likely impact the community planning or at least open up planning discussions.

Designated Distressed Counties

Distressed counties rank among the 10 percent most economically distressed counties in the nation. Each year, the Appalachian Regional Commission (ARC) prepares an index of county economic status for every county in the United States. Economic status designations are identified through a composite measure of each county's three-year average unemployment rate, per capita market income, and poverty rate. Based on these indicators, each county is then categorized as distressed, at-risk, transitional, competitive or attainment. The distressed counties in our area are Perry and Wayne, with Lewis being identified as "at risk" for becoming distressed. Source: tn.gov
